**5. THE INFORMATION DISCLOSED IS GIVEN TO THE BEST OF SELLER'S KNOWLEDGE.**

6. **NOTICE:** This Disclosure Statement satisfies the disclosure requirements of MN Statutes 513.52 through 513.60.  
7. Under Minnesota law, sellers of residential property, with limited exceptions listed on page nine (9), are obligated to  
8. disclose to prospective buyers all material facts of which Seller is aware that could adversely and significantly affect  
9. an ordinary buyer's use or enjoyment of the property or any intended use of the property of which Seller is aware.  
10. MN Statute 513.58 requires Seller to notify buyer in writing as soon as reasonably possible, but in any event before  
11. closing, if Seller learns that Seller's disclosure was inaccurate. Seller is obligated to continue to notify Buyer, in writing,  
12. of any facts disclosed herein (new or changed) of which Seller is aware that could adversely and significantly affect the  
13. Buyer's use or enjoyment of the property or any intended use of the property that occur up to the time of closing.  
14. Seller has disclosure alternatives allowed by MN Statutes. See *Disclosure Statement: Seller's Disclosure Alternatives*  
15. form for further information regarding disclosure alternatives. This disclosure is not a warranty or a guarantee of any  
16. kind by Seller or licensee(s) representing or assisting any party in the transaction and are not a substitute for any  
17. inspections or warranties the party(ies) may wish to obtain.

18. For purposes of the seller disclosure requirements of MN Statutes 513.52 through 513.60:  
19. "Residential real property" or "residential real estate" means property occupied as, or intended to be occupied as, a  
20. single-family residence, including a unit in a common interest community as defined in MN Statute 515B.1-103, clause  
21. (10), regardless of whether the unit is in a common interest community not subject to chapter 515B.

22. The seller disclosure requirements of MN Statutes 513.52 through 513.60 apply to the transfer of any interest in  
23. residential real estate, whether by sale, exchange, deed, contract for deed, lease with an option to purchase or any  
24. other option.

25. **INSTRUCTIONS TO BUYER:** Buyers are encouraged to thoroughly inspect the property personally or have it inspected  
26. by a third party, and to inquire about any specific areas of concern. **NOTE:** If Seller answers NO to any of the questions  
27. listed below, it does not necessarily mean that it does not exist on the property. NO may mean that Seller is unaware  
28. that it exists on the property.

29. **INSTRUCTIONS TO SELLER:** (1) Complete this form yourself. (2) Consult prior disclosure statement(s) and/or  
30. inspection report(s) when completing this form. (3) Describe conditions affecting the property to the best of your

299. **O. WATER INTRUSION AND MOLD GROWTH:** Recent studies have shown that various forms of water intrusion  
300. affect many homes. Water intrusion may occur from exterior moisture entering the home and/or interior moisture  
301. leaving the home.

302. Examples of exterior moisture sources may be

- 303. • improper flashing around windows and doors,
- 304. • improper grading,
- 305. • flooding,
- 306. • roof leaks.

307. Examples of interior moisture sources may be

- 308. • plumbing leaks,
- 309. • condensation (caused by indoor humidity that is too high or surfaces that are too cold),
- 310. • overflow from tubs, sinks or toilets,
- 311. • firewood stored indoors,
- 312. • humidifier use,
- 313. • inadequate venting of kitchen and bath humidity,
- 314. • improper venting of clothes dryer exhaust outdoors (including electrical dryers),
- 315. • line-drying laundry indoors,
- 316. • houseplants—watering them can generate large amounts of moisture.

317. In addition to the possible structural damage water intrusion may do to the property, water intrusion may also result  
318. in the growth of mold, mildew and other fungi. Mold growth may also cause structural damage to the property.  
319. Therefore, it is very important to detect and remediate water intrusion problems.

320. Fungi are present everywhere in our environment, both indoors and outdoors. Many molds are beneficial to  
321. humans. However, molds have the ability to produce mycotoxins that may have a potential to cause serious health  
322. problems, particularly in some immunocompromised individuals and people who have asthma or allergies to  
323. mold.

324. To complicate matters, mold growth is often difficult to detect, as it frequently grows within the wall structure. If you  
325. have a concern about water intrusion or the resulting mold/mildew/fungi growth, you may want to consider having the  
326. property inspected for moisture problems before entering into a purchase agreement or as a condition of your  
327. purchase agreement. Such an analysis is particularly advisable if you observe staining or musty odors on the  
328. property.

329. For additional information about water intrusion, indoor air quality, moisture or mold issues, please view the

# Radon in Real Estate Transactions

All Minnesota homes can have dangerous levels of **radon gas** in them. Radon is a colorless, odorless and tasteless **radioactive gas** that can seep into homes from the earth. When inhaled, its radioactive particles can damage the cells that line the lungs. Long-term exposure to radon can lead to **lung cancer**. About 21,000 lung cancer deaths each year in the United States are caused by radon, making it a serious health concern for all Minnesotans.

It **does not matter if the home is old or new** and the only way to know how much radon gas has entered the home is to conduct a radon test. MDH estimates **2 in 5 homes built before 2010** and **1 in 5 homes built since 2010** exceed the 4.0 pCi/L action level.

In Minnesota, buyers and sellers in a real estate transaction are free to negotiate radon testing and reduction. Ultimately, it is up to the buyer to decide an acceptable level of radon risk in the home. Prospective buyers should keep in mind that it is inexpensive and easy to measure radon, and radon levels can be lowered at a reasonable cost. The MDH Radon Program website provides more detailed information on radon, including the MDH brochure "Keeping Your Home Safe from Radon."

The Minnesota Radon Awareness Act does not require radon testing or mitigation. However, many relocation companies and lending institutions, as well as home buyers, require a radon test when purchasing a house. The purpose of this publication is to educate and inform potential home buyers of the risks of radon exposure, and how to test for and reduce radon as part of real estate transactions.

## Disclosure Requirements

Effective January 1, 2014, the Minnesota Radon Awareness Act requires specific disclosure and education be provided to potential home buyers during residential real estate transactions in Minnesota. This publication is being provided by the seller in order to meet a requirement of the Act. In addition, **before signing a purchase agreement to sell or transfer residential real property**, the seller shall disclose in writing to the buyer any knowledge the seller has of radon concentrations in the dwelling.

The disclosure shall include:

1. whether a radon test or tests have occurred on the property;
2. the most current records and reports pertaining to radon concentrations within the dwelling;
3. a description of any radon concentrations, mitigation, or remediation;
4. information regarding the radon mitigation system, including system description and documentation, if such system has been installed in the dwelling; and
5. a radon warning statement

### Radon Warning Statement

"The Minnesota Department of Health strongly recommends that ALL homebuyers have an indoor radon test performed prior to purchase or taking occupancy, and recommends having the radon levels mitigated if elevated radon concentrations are found. Elevated radon concentrations can easily be reduced by a qualified, certified, or licensed, if applicable, radon mitigator.

Every buyer of any interest in residential real property is notified that the property may present exposure to dangerous levels of indoor radon gas that may place the occupants at risk of developing radon-induced lung cancer. Radon, a Class A human carcinogen, is the leading cause of lung cancer in nonsmokers and the second leading cause overall. The seller of any interest in residential real property is required to provide the buyer with any information on radon test results of the dwelling."

## Radon Facts

### How dangerous is radon?

Radon is the **number one cause of lung cancer in non-smokers** and the second leading cause of lung cancer overall, next to tobacco smoking. Thankfully, much of this risk can be prevented through testing and taking action to reduce high levels of radon gas when and where they are found. Your risk for lung cancer increases with higher levels of radon gas, prolonged exposure and whether or not you are a smoker.

### Where is your greatest exposure to radon?

Radon is present everywhere, and there is no known safe level. Your greatest exposure is where it can concentrate indoors and where you spend most of your time. For most Minnesotans, this is at home. Whether a home is old or new, well-sealed or drafty, with or without a basement, **any home can have high levels of radon**.

### Where does Radon come from?

Radon comes from the soil. It is produced by the natural decay of uranium and radium commonly found in nearly all soils in Minnesota. As a gas, radon moves freely through the soil and eventually into the air you breathe. Our homes tend to draw soil gases, including radon, into the structure.

### I have a new home, aren't radon levels reduced already?

Homes built in Minnesota since June 2009 are required to contain construction features that may limit radon entry. These features are known as passive Radon Resistant New Construction (RRNC). While these passive RRNC features may lower the amount of radon in newer homes, it does not guarantee low levels. It is recommended all new homes be tested for radon, and if elevated levels are found, these passive RRNC features can be easily and inexpensively activated with the addition of a radon fan in the attic. If you are buying a new home, ask if the home has any RRNC features and if the home has been tested.

### What is the recommended action based on my results?

If the average radon in the home is at or **above 4.0 pCi/L, the house should be fixed**. Consider fixing the home if radon levels are between 2 pCi/L and 3.9 pCi/L. While it isn't possible to reduce radon to zero, the best approach is to reduce the radon levels to as low as reasonably achievable. Any amount of radon, even below the recommended action level, carries some risk.

### How are radon tests conducted in real estate transactions?

Because of the unique nature of real estate transactions, involving multiple parties and financial interests, there are special protocols for radon testing.

#### Continuous Radon Monitor (CRM)

*Fastest*

Test is completed by a certified contractor with a calibrated CRM for a minimum of 48 hours.

Test report is analyzed to ensure that it is a valid test.

#### Simultaneous Short-term Testing

*Second fastest*

Two short-term test kits are used at the same time, placed 6-12 inches apart, for a minimum of 48 hours.

Test kits are sent to the lab for analysis.

The two test results are averaged to get the radon level.

#### Sequential Short-Term Testing

*Slowest*

One short-term test is performed for a minimum of 48 hours.

Test kit is sent to lab for analysis.

Another short-term kit is used in the same place as the first, started right after the first test is taken down. Test is performed for a minimum of 48 hours.

Test kit is sent to the lab for analysis.

The two test results are averaged to get the radon level.

## Radon Testing

### House conditions when testing

Be aware that any test lasting less than three months requires closed-house conditions.

**Closed-house Conditions:** Mean keeping all windows and doors closed, except for normal entry and exit.

**Before Testing:** Begin closed-house conditions at least 12 hours before the start of the radon test.

**During Testing:** Maintain closed-house conditions during the entire duration of the short term test. Operate home heating or cooling systems normally during the test.

### Where the test should be conducted

Any radon test conducted for a real estate transaction needs to be placed in the lowest livable area of the home suitable for occupancy. In Minnesota, this is typically in the basement, whether it is finished or unfinished.

The test kit should be placed:

- two to six feet above the floor
- at least three feet from exterior walls
- four inches away from other objects
- in a location where it won't be disturbed
- not in enclosed areas
- not in areas of high heat or humidity

If the house has multiple foundation types, it is recommended that each of these be tested. For instance, if the house has one or more of the following foundation types—basement, crawl space, slab-on-grade—a test should be performed in the basement and in at least one room over the crawlspace and one room with a slab-on-grade area.

### Who should conduct radon testing in real estate transactions?

All radon tests should be conducted in accordance with national radon measurement protocols, by a certified and MDH-listed professional. This ensures the test was conducted properly, in the correct location, and under appropriate building conditions. A list of these radon measurement professionals can be found at MDH's Radon web site. A seller may have previously conducted testing in a property. If the test result is at or above the action level, the home should be mitigated.

## Radon Mitigation

### Lowering radon in existing homes – Radon Mitigation

When elevated levels of radon are found, they should be mitigated. Elevated radon concentrations can be easily reduced by a nationally certified and MDH-listed radon mitigation professional. A list of these radon mitigation professionals can be found at MDH's Radon web site.

Radon mitigation is the process or system used to reduce radon concentrations in the breathing zones of occupied buildings. The goal of a radon mitigation system is to reduce the indoor radon levels to below the EPA action level of 4.0 pCi/L. A quality radon reduction (mitigation) system is often able to reduce the annual average radon level to below 2.0 pCi/L.

Active sub-slab suction (also called sub-slab depressurization, or SSD) is the most common and usually the most reliable type of system because it draws radon-filled air from beneath the house and vents it outside. There are standards of practice that need to be followed for the installation of these systems. More information on radon mitigation can be found at the MDH Radon website.

### After a radon reduction system is installed

Perform an independent short-term test to ensure that the reduction system is effective. Make sure the radon system is operating during the entire test. Once a confirmatory radon test shows low levels of radon in the home, be sure to retest the house every two years to confirm continued radon reduction.

Contact the MDH Radon Program if you are uncertain about anything regarding radon testing or mitigation.

The MDH Radon Program can provide:

- Information about radon health effects, radon testing and radon mitigation;
- Names of trained, certified and MDH-listed radon professionals;
